DETAILED ACTION

Response to Reply

The examiner is in receipt of applicant's response to office action mailed 4/23/2008, which was received 7/16/2008. Acknowledgement is made to the amendment to claims 1,7,9,17,23,25,33,39 and 41. Applicant's amendment and remarks have been carefully considered and were found to be persuasive, therefore the following reasons for allowance follows:

Rejoinder

Claims 1,17 and 33 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 2-6,11-16,18-22,27-32,34-38 and 43-48, directed to dependent species using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 9/10/2007 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the

Art Unit: 3625

instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Steven Schaefer on 10/10/2008.

The application has been amended as follows:

In claim 1 - line, after "A" delete "method of electronic commerce," and insert--computer-implemented method of conducting electronic commerce, wherein the method comprises one or more machines executing instructions stored in machine-readable storage medium to cause the machine to perform operations --

The following is an examiner's statement of reasons for allowance:

Regarding claims 1,17 and 33

The following is an Examiner's statement of the reasons for allowance for independent claims 1,17 and 33.

The present invention is directed to a method, system and apparatus that "...includes two phases--a system configuration phase and a subsequent system usage phase. The system configuration phase includes, among other things, "receiving dynamic attribute parameters defining an administrator dynamic attribute by which to measure the desirability of a specific responder for a potential commercial transaction involving a requestor and a responder," and "receiving a criterion to automatically determine whether to associate the administrator dynamic attribute with a particular opportunity object, created later, representing a particular potential commercial transaction involving a requestor and a responder." The system usage phase includes, among other things, "receiving user input from a requestor to generate a new opportunity object," where "the user input includes opportunity attribute data for one or more attributes of the particular potential commercial transaction, determining whether the particular potential commercial transaction for which the new opportunity object is being generated meets the criterion based on the user input opportunity attribute data," and if so, "automatically associating the administrator dynamic attribute with the new opportunity object."

Figure 10B and the corresponding description in Applicant's specification provide an illustrative example of the system configuration aspects of claim 1, showing a step-by-step process whereby an administrator, for example, creates a dynamic attribute and criteria for automatically associating the dynamic attribute with one or more particular opportunity objects that are created later by a requestor. Then, when the requestor subsequently creates an opportunity

Art Unit: 3625

object with opportunity attributes matching the criteria, the opportunity object will include not only the standard attributes, but will also include the dynamic attribute. [Applicant's Specification, at 0067.] This allows for the creation of one or more dynamic attributes that are associated only with particular opportunity objects meeting an established criteria, which may be based upon any of the opportunity attributes (e.g., the type of opportunity or the particular product or service being requested, etc.) that may be entered by the requestor when creating the opportunity object” (applicant’s remarks received 7/10/2008, page 19 and 20).

Each of the claims recites the novel feature inter alia “determining whether the particular potential commercial transaction for which the new opportunity object is being generated meets the criterion based on the user input opportunity attribute data; and ...automatically associating the administrator dynamic attribute with the new opportunity object if the particular potential commercial transaction for which the new opportunity object is being created meets the criterion.”

The most remarkable prior art of record is to Scott et al. (US PG PUB 20020198818) and Coffman et al. (US PG PUB 20040215467).

Although Scott disclosed many features similar to those recited in the above- indicated claims, Scott still fails to teach the above-noted features in the above noted reasons for allowance.

Coffman teaches a system handling requests for quotations. Coffman still fails to teach the above-noted features in the above- noted features in the above noted reasons for allowance.

Businesswire1, discloses generating RFQ from existing requisitions and estimates. Businesswire1, however, fails to teach the claimed features as provided above.

PR Newswire1, discloses . PR Newswire1, however, fails to teach the claimed features as provided above.

Businesswire2, discloses a Quote manager that automatically inserts redundant information into and electronically distributed RFQ. Businesswire2, however, fails to teach the claimed features as provided above.

PR Newswire2, discloses an RFQ generator receives information electronically and automatically generates a purchase order. PR Newswire1, however, fails to teach the claimed features as provided above.
